

OKKULO

Goalkeeper Training

The OKKULO lighting conditions take advantage of biological processes in the eyes and brain that delay our perception under reduced illumination. Sports training under such conditions requires a speeding up of response times that translates into improved performance that can be the difference between “what if” and delivered results.

Player data taken over 9 sessions - Session 1 and Session 9 are in natural light levels. The total duration for all 9 sessions was circa 30 minutes to achieve a 100% save record with a 15 ball delivery.

Training in OKKULO prior to playing on a match day will allow the user to carry over the OKKULO EFFECT and deliver results where it matters most..... on the pitch.
